SYNECTIC $\mid$ mewron

ELONGATION AT
BREAK

| RIGID 10K | 7980 psi | 1090 ksi | 2\% | Glass-filled resin <br> Highly resistant to heat and chemicals Simulates stiffness of glass and fiber-filled thermoplastics | Parts needing to withstand significant load without bending. | Datasheet |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| RIGID 4000 | 4786 psi | 305 ksi | 23\% | Glass-filled resin Simulates stiffness of PEEK Smooth, polished finish | Load bearing applications, jigs and fixtures, and thinwalled parts. | Datasheet |
| $\begin{gathered} \text { TOUGH } \\ 2000 \end{gathered}$ | 4206 psi | 174 ksi | 74\% | ABS-like strength and stiffness Stiff and sturdy | Strong and sturdy rugged prototypes that are difficult to bend. | Datasheet |
| $\begin{gathered} \text { TOUGH } \\ 1500 \end{gathered}$ | 3771 psi | 136 ksi | 69\% | Simulates strength and stiffness of polypropylene Stiff and pliable Certified for permanent skin contact | Stiff and pliable resilient prototypes that bend and spring back easily. | Datasheet |
| DURABLE | 1900 psi | 34 ksi | 75\% | Simulates strength and stiffness of polyethylene Impact-resistant, and lubricious Soft and pliable | Soft and pliable parts that bend easily and spring back slowly. | Datasheet |
| $\begin{gathered} \text { FLEXIBLE } \\ 80 \mathrm{~A} \end{gathered}$ | 539 psi | N/A | 100\% | Simulates the flexibility of rubber or TPU Balances softness with strength Withstands repeated cycles of bending and flexing | Harder flexible parts that return to shape slowly. | Datasheet |
| $\begin{gathered} \text { ELASTIC } \\ 50 \mathrm{~A} \end{gathered}$ | 234 psi | N/A | 100\% | Similar to silicone <br> Suitable for wearable medical devices and robotics | Softer flexible parts that return to shape quickly. | Datasheet |
